

APPENDIX 1

1. THE 69 PLANTS AND EVIDENCE OF THEIR USE IN ALOPECIA

Plant name	Family	Reference of use in alopecia/hair loss
<i>Acacia concinna</i>	Fabaceae	Agrawal, S.S., Ahmad, M. and Mazhar, M., Therapeutic Potential of Some Medicinal Plants in Alopecia.
<i>Albizia julibrissin</i>	Fabaceae	Lee, J.Y., Im, K.R., Jung, T.K., Lee, M.H. and Yoon, K.S., 2012. Medicinal herbal complex extract with potential for hair growth-promoting activity. Journal of the Society of Cosmetic Scientists of Korea, 38(4), pp.277-287.
<i>Allium cepa</i>	Amaryllidaceae	Singh, R., Tripathi, S., Gupta, D. and Pujari, N.M., 2022. Evaluation of Pharmacognostical Properties And Hair Growth Promoting Activity Of Allium cepa. Journal of Pharmaceutical Negative Results, pp.3768-3773.
<i>Allium sativum</i>	Amaryllidaceae	Bassino, E., Gasparri, F. and Munaron, L., 2020. Protective role of nutritional plants containing flavonoids in hair follicle disruption: A review. <i>International Journal of Molecular Sciences</i> , 21(2), p.523.
<i>Aloe vera</i>	Asphodelaceae	Rathi, V., Rathi, J., Tamizharasi, S. and Pathak, A., 2008. Plants used for hair growth promotion: A review. <i>Pharmacognosy Reviews</i> , 2(3), p.185.
<i>Alpinia zerumbet</i>	Zingiberaceae	Taira, N., Nguyen, B.C.Q. and Tawata, S., 2017. Hair growth promoting and anticancer effects of p21-activated kinase 1 (PAK1) inhibitors isolated from different parts of Alpinia zerumbet. <i>Molecules</i> , 22(1), p.132.
<i>Ammi majus</i>	Apiaceae	Bhagavathula, A.S., Al-Khatib, A.J.M., Elnour, A.A., Al Kalbani, N.M. and Shehab, A., 2015. Ammi Visnaga in treatment of urolithiasis and hypertriglyceridemia. <i>Pharmacognosy research</i> , 7(4), p.397.
<i>Andrographis paniculata</i>	Acanthaceae	Kumar, N., Rungseevijitprapa, W., Narkkhong, N.A., Suttajit, M. and Chaiyasut, C., 2012. 5α-reductase inhibition and hair growth promotion of some Thai plants traditionally used for hair treatment. <i>Journal of ethnopharmacology</i> , 139(3), pp.765-771.
<i>Angelica dahurica</i>	Apiaceae	Leem, J., Jung, W., Kim, Y., Kim, B. and Kim, K., 2018. Exploring the combination and modular characteristics of herbs for alopecia treatment in traditional Chinese medicine: an association rule mining and network analysis study. <i>BMC complementary and alternative medicine</i> , 18(1), pp.1-13.
<i>Angelica gigas</i>	Apiaceae	Lee, Y.G. and Kim, J.K., 2004. The study of the oriental medicine extract on the hair growth Effect: I. The effect of the mixture extract of Polygoni multiflori Radix, Angelicae gigantis Radix and Lycii Fructus on the hair growth. <i>The Korea Journal of Herbology</i> , 19(2), pp.83-83.
<i>Angelica sinensis</i>	Apiaceae	Leem, J., Jung, W., Kim, Y., Kim, B. and Kim, K., 2018. Exploring the combination and modular characteristics of herbs for alopecia treatment in traditional Chinese medicine: an association rule mining and network analysis study. <i>BMC complementary and alternative medicine</i> , 18(1), pp.1-13.
<i>Artemisia abrotanum</i>	Asteraceae	Ekiert, H., Knut, E., Świątkowska, J., Klin, P., Rzepiela, A., Tomczyk, M. and Szopa, A., 2021. Artemisia abrotanum L.(Southern Wormwood)—History, Current Knowledge on the Chemistry, Biological Activity, Traditional Use and Possible New Pharmaceutical and Cosmetological Applications. <i>Molecules</i> , 26(9), p.2503.
<i>Averrhoa carambola</i>	Oxalidaceae	Kumar, N., Rungseevijitprapa, W., Narkkhong, N.A., Suttajit, M. and Chaiyasut, C., 2012. 5α-reductase inhibition and hair growth

		promotion of some Thai plants traditionally used for hair treatment. Journal of ethnopharmacology, 139(3), pp.765-771.
<i>Avicennia marina</i>	Acanthaceae	Jain, R., Monthakantirat, O., Tengamnuay, P. and De-Eknamkul, W., 2014. Avicequinone C isolated from <i>Avicennia marina</i> exhibits 5 α -reductase-type 1 inhibitory activity using an androgenic alopecia relevant cell-based assay system. <i>Molecules</i> , 19(5), pp.6809-6821.
<i>Azadirachta indica</i>	Meliaceae	Uchegbu, M., Okoli, I., Esonu, B. and Iloeje, M., 2011. The growing importance of neem (<i>Azadirachta indica</i> A. Juss) in agriculture, industry, medicine and Environment: A review. <i>Research Journal of Medicinal Plant</i> , 5(3), pp.230-245.
<i>Bidens tripartita</i>	Asteraceae	Jellin, J.M., Batz, F. and Hitchens, K., 2004. Natural medicines comprehensive database. <i>Therapeutic Research Faculty</i> .
<i>Camellia sinensis</i>	Theaceae	Dhariwala, M.Y. and Ravikumar, P., 2019. An overview of herbal alternatives in androgenetic alopecia. <i>Journal of cosmetic dermatology</i> , 18(4), pp.966-975.
<i>Carthamus tinctorius</i>	Asteraceae	Kumar, N., Rungseevijitprapa, W., Narkkhong, N.A., Sutajit, M. and Chaiyasut, C., 2012. 5 α -reductase inhibition and hair growth promotion of some Thai plants traditionally used for hair treatment. <i>Journal of ethnopharmacology</i> , 139(3), pp.765-771.
<i>Cedrus deodara</i>	Pinaceae	Chaudhary, A., Kaur, P., Singh, B. and Pathania, V., 2009. Chemical composition of hydrodistilled and solvent volatiles extracted from woodchips of Himalayan Cedrus: <i>Cedrus deodara</i> (Roxb.) Loud. <i>Natural product communications</i> , 4(9), p.1934578X0900400920.
<i>Chrysanthemum morifolium</i>	Asteraceae	Wiart, C., 2007. <i>Ethnopharmacology of medicinal plants: Asia and the Pacific</i> . Springer Science & Business Media.
<i>Chrysanthemum zawadskii</i>	Asteraceae	Li, Z., Li, J., Gu, L., Begum, S., Wang, Y., Sun, B., Lee, M. and Sung, C., 2014. <i>Chrysanthemum zawadskii</i> extract induces hair growth by stimulating the proliferation and differentiation of hair matrix. <i>International Journal of Molecular Medicine</i> , 34(1), pp.130-136.
<i>Clitoria ternatea</i>	Fabaceae	Kumar, N., Rungseevijitprapa, W., Narkkhong, N.A., Sutajit, M. and Chaiyasut, C., 2012. 5 α -reductase inhibition and hair growth promotion of some Thai plants traditionally used for hair treatment. <i>Journal of ethnopharmacology</i> , 139(3), pp.765-771.
<i>Cnidium officinale</i>	Apiaceae	Lee, J.Y., Im, K.R., Jung, T.K., Lee, M.H. and Yoon, K.S., 2012. Medicinal herbal complex extract with potential for hair growth-promoting activity. <i>Journal of the Society of Cosmetic Scientists of Korea</i> , 38(4), pp.277-287.
<i>Coffea arabica</i>	Rubiaceae	Bassino, E., Gasparri, F. and Munaron, L., 2020. Protective role of nutritional plants containing flavonoids in hair follicle disruption: A review. <i>International Journal of Molecular Sciences</i> , 21(2), p.523.

1	34959442	Modulation of Hair Growth Promoting Effect by Natural Products.	A large number of people suffer from alopecia or hair loss worldwide. Drug-based therapies using minoxidil and finasteride for the treatment of alopecia are available but they have shown various side effects in patients. Thus, the use of new therapeutic approaches using bioactive products to reduce the risk of anti-hair-loss medications has been emphasized. Natural products have been used since ancient times and have been proven safe with few side effects. Several studies have demonstrated the use of plants and their extracts to promote hair growth. Moreover, commercial products based on these natural ingredients have been developed for the treatment of alopecia. Several clinical animal and cell-based studies have been conducted to determine the anti-aloepecia effects of plant-derived biochemicals. This review is a collective study of phytochemicals with anti-aloepecia effects focusing mainly on the mechanisms underlying their hair-growth-promoting effects.

		An outbreak of a disease characterized by emaciation dermatitis with erythema alopecia foul-smelling exudation crusting hyperpigmentation lichenification and edema of fore- and hindlimbs chest and dewlap is described affecting cattle in the State of Alagoas Northeastern Brazil. Microscopically the main lesions were characterized by diffuse dermatitis with infiltration of lymphocytes histiocytes parakeratotic hyperkeratosis and acanthosis. The plant <i>Tephrosia noctiflora</i> which exhibited signs of consumption infested the grazing areas of cattle. To test its toxicity <i>T. noctiflora</i> was harvested dried in the shade crushed and sourced at a concentration of 50% mixed with commercial food for three guinea pigs. The main clinical signs in guinea pigs included weight loss and multifocal moderate to severe areas of alopecia diffuse erythema of the skin vaginal edema and hematuria. Microscopically lymphocytic and histiocytic dermatitis parakeratotic hyperkeratosis and acanthosis were noted in guinea pigs. This experiment confirms that <i>T. noctiflora</i> is the cause of outbreaks of dermatitis observed in cattle grazing in areas infested by this plant.

PURPOSE: Androgenetic alopecia, commonly known as male pattern baldness, is the most common type of progressive hair loss disorder in men. The aim of this paper is to review recent advances in understanding the pathophysiology and molecular mechanism of androgenetic alopecia.

METHODS: Using the PubMed database, we conducted a systematic review of the literature, selecting studies published from 1916 to 2016.

RESULTS: The occurrence and development of androgenetic alopecia depends on the interaction of endocrine factors and genetic predisposition. Androgenetic

alopecia is characterized by progressive hair follicular miniaturization, caused by the actions of androgens on the epithelial cells of genetically susceptible hair follicles in androgen-dependent areas. Although the exact pathogenesis of androgenetic alopecia remains to be clarified, research has shown that it is a polygenic condition. Numerous studies have unequivocally identified two major genetic risk loci for androgenetic alopecia, on the X-chromosome AR/EDA2R locus and the chromosome 20p11 locus.

CONCLUSIONS: Candidate gene and genome-wide association studies have reported that single-nucleotide polymorphisms at different genomic loci are associated with androgenetic alopecia development. A number of genes determine the predisposition for androgenetic alopecia in a polygenic fashion. However, further studies are needed before the specific genetic factors of this polygenic condition can be fully explained.

BACKGROUND: Androgenetic alopecia (AGA) is the most common form of hair loss consisting of a characteristic receding frontal hairline in men and diffuse hair thinning in women, with frontal hairline retention, and can impact an individual's quality of life. The condition is primarily mediated by 5-alpha-reductase and dihydrotestosterone (DHT) which causes hair follicles to undergo miniaturization and shortening of successive anagen cycles. Although a variety of medical, surgical, light-based and nutraceutical treatment options are available to slow or reverse the progression of AGA, it can be challenging to select appropriate therapies for this chronic condition.

AIMS: To highlight treatment options for androgenetic alopecia taking into consideration the efficacy, side effect profiles, practicality of treatment (compliance), and costs to help clinicians offer ethically appropriate treatment

regimens to their patients.

MATERIALS AND METHODS: A literature search was conducted using electronic databases (Medline, PubMed, Embase, CINAHL, EBSCO) and textbooks, in addition to the authors' and other practitioners' clinical experiences in treating androgenetic alopecia, and the findings are presented here.

RESULTS: Although topical minoxidil, oral finasteride, and low-level light therapy are the only FDA-approved therapies to treat AGA, they are just a fraction of the treatment options available, including other oral and topical modalities, hormonal therapies, nutraceuticals, PRP and exosome treatments, and hair transplantation.

DISCUSSION: Androgenetic alopecia therapy remains challenging as treatment selection involves ethical, evidence-based decision-making and consideration of each individual patient's needs, compliance, budget, extent of hair loss, and aesthetic goals, independent of potential financial benefits to the practitioners.

DESCRIPTION OF CDK MOLECULAR DESCRIPTORS CLASSES

Class	Description
AcidicGroupCountDescriptor	Returns the number of acidic groups.
ALOGPDescriptor	This class calculates ALOGP (Ghose-Crippen LogKow) and the Ghose-Crippen molar refractivity [Ghose, A.K. and Crippen, G.M. , <i>Atomic physicochemical parameters for three-dimensional structure-directed quantitative structure-activity relationships. I. Partition coefficients as a measure of hydrophobicity</i> , Journal of Computational Chemistry, 1986, 7:565-577, doi:10.1002/jcc.540070419, Ghose, A.K. and Crippen, G.M. , <i>Atomic physicochemical parameters for three-dimensional-structure-directed quantitative structure-activity relationships. 2. Modeling dispersive and hydrophobic interactions</i> , Journal of Chemical Information and Computer Science, 1987, 27:21-35, doi:10.1021/ci00053a005].
AminoAcidCountDescriptor	Class that returns the number of each amino acid in an atom container.
APolDescriptor	Sum of the atomic polarizabilities (including implicit hydrogens).
AromaticAtomsCountDescriptor	Class that returns the number of aromatic atoms in an atom container.
AromaticBondsCountDescriptor	This Class contains a method that returns the number of aromatic atoms in an AtomContainer.
AtomCountDescriptor	IDescriptor based on the number of atoms of a certain element type.
AutocorrelationDescriptorCharge	This class calculates ATS autocorrelation descriptor, where the weight equal to the charges.
AutocorrelationDescriptorMass	This class calculates ATS autocorrelation descriptor, where the weight equal to the scaled atomic mass [Moreau G. and Broto P., <i>The autocorrelation of a topological structure: A new molecular descriptor</i> , Nouveau Journal de Chimie, 1980, ?:359-360].
AutocorrelationDescriptorPolarizability	This class calculates ATS autocorrelation descriptor, where the weight equal to the charges.
BasicGroupCountDescriptor	Returns the number of basic groups.

BCUTDescriptor	Eigenvalue based descriptor noted for its utility in chemical diversity.
BondCountDescriptor	IDescriptor based on the number of bonds of a certain bond order.
BPolDescriptor	Sum of the absolute value of the difference between atomic polarizabilities of all bonded atoms in the molecule (including implicit hydrogens) with polarizabilities taken from http://www.sunysccc.edu/academic/mst/ptable/p-table2.htm This descriptor assumes 2-centered bonds.
CarbonTypesDescriptor	Topological descriptor characterizing the carbon connectivity.
ChiChainDescriptor	Evaluates chi chain descriptors.
ChiClusterDescriptor	Evaluates chi cluster descriptors.
ChiPathClusterDescriptor	Evaluates chi path cluster descriptors.
ChiPathDescriptor	Evaluates chi path descriptors.
CPSADescriptor	Calculates 29 Charged Partial Surface Area (CPSA) descriptors.
EccentricConnectivityIndexDescriptor	A topological descriptor combining distance and adjacency information.
FMFDescriptor	An implementation of the FMF descriptor characterizing complexity of a molecule.
FractionalPSADescriptor	Polar surface area expressed as a ratio to molecular size.
FragmentComplexityDescriptor	Class that returns the complexity of a system.
GravitationalIndexDescriptor	IDescriptor characterizing the mass distribution of the molecule.
HBondAcceptorCountDescriptor	This descriptor calculates the number of hydrogen bond acceptors using a slightly simplified version of the PHACIR atom types.
HBondDonorCountDescriptor	This descriptor calculates the number of hydrogen bond donors using a slightly simplified version of the PHACIR atom types.
HybridizationRatioDescriptor	IMolecularDescriptor that reports the fraction of sp ³ carbons to sp ² carbons.
IPMolecularLearningDescriptor	Deprecated
KappaShapeIndicesDescriptor	Kier and Hall kappa molecular shape indices compare the molecular graph with minimal and maximal molecular graphs; a description is given at: http://www.chemcomp.com/Journal_of_CCG/Features/descr.htm#KH : "they are intended to capture different aspects of molecular shape.
KierHallSmartsDescriptor	A fragment count descriptor that uses e-state fragments.
LargestChainDescriptor	Class that returns the number of atoms in the largest chain.
LargestPiSystemDescriptor	Class that returns the number of atoms in the largest pi system.
LengthOverBreadthDescriptor	Evaluates length over breadth descriptors.
LongestAliphaticChainDescriptor	Class that returns the number of atoms in the longest aliphatic chain.
MannholdLogPDescriptor	Prediction of logP based on the number of carbon and hetero atoms.
MDEDescriptor	Calculates the Molecular Distance Edge descriptor described in [Liu, S. and Cao, C. and Li, Z., <i>Approach to Estimation and Prediction for Normal Boiling Point (NBP) of Alkanes Based on a Novel Molecular Distance Edge (MDE) Vector, lambda</i> , Journal of Chemical Information and Computer Sciences, 1998, 38:387-394].
MomentOfInertiaDescriptor	A descriptor that calculates the moment of inertia and radius of gyration.
PetitjeanNumberDescriptor	According to the Petitjean definition, the eccentricity of a vertex corresponds to the distance from that vertex to the most remote vertex in the graph.

PetitjeanShapeIndexDescriptor	Evaluates the Petitjean shape indices, These original Petitjean number was described by Petitjean ([Petitjean, M. , <i>Applications of the radius-diameter diagram to the classification of topological and geometrical shapes of chemical compounds</i> , Journal of Chemical Information and Computer Science, 1992, 32:331-337]) and considered the molecular graph.
RotatableBondsCountDescriptor	The number of rotatable bonds is given by the SMARTS specified by Daylight on SMARTS tutorial
RuleOfFiveDescriptor	This Class contains a method that returns the number failures of the Lipinski's Rule Of 5.
SmallRingDescriptor	Small ring descriptors: these are based on enumeration of all the small rings (sizes 3 to 9) in a molecule, which can be obtained quickly and deterministically.
TPSADescriptor	Calculation of topological polar surface area based on fragment contributions (TPSA) [Ertl, P. and Rohde, B. and Selzer, P., Fast Calculation of Molecular Polar Surface Area as a Sum of Fragment-Based Contributions and Its Application to the Prediction of Drug Transport Properties, J. Med. Chem., 2000, 43:3714-3717, doi:10.1021/jm000942e].
VABCDescriptor	Volume descriptor using the method implemented in the VABCVolume class.
VAdjMaDescriptor	Vertex adjacency information (magnitude): $1 + \log_2 m$ where m is the number of heavy-heavy bonds.
WeightDescriptor	IDescriptor based on the weight of atoms of a certain element type.
WeightedPathDescriptor	Evaluates the weighted path descriptors.
WHIMDescriptor	Holistic descriptors described by Todeschini et al [Todeschini, R. and Gramatica, P., <i>New 3D Molecular Descriptors: The WHIM theory and QAR Applications</i> , Persepctives in Drug Discovery and Design, 1998, ?:355-380].
WienerNumbersDescriptor	This descriptor calculates the Wiener numbers.
XLogPDescriptor	Prediction of logP based on the atom-type method called XLogP.
ZagrebIndexDescriptor	Zagreb index: the sum of the squares of atom degree over all heavy atoms i.

SNAPSHOT OF THE CSV CONTAINING THE MOLECULAR DESCRIPTORS-ACTIVITY FOR THE BINDING TO AR RECEPTOR

IMPORTANT MOLECULAR DESCRIPTORS FOR THE RF MODEL

Descriptor	Description	Class
BCUTc-1h	nlow highest partial charge weighted BCUTS	2D
piPC6	Conventional bond order ID number of order 6 ($\ln(1+x)$)	2D
MDEC-23	Molecular distance edge between all secondary and tertiary carbons	2D
MLFER_L	Solute gas-hexadecane partition coefficient	2D
AATSC1p	Average centered Broto-Moreau autocorrelation - lag 1 / weighted by polarizabilities	2D
SdssC	Sum of atom-type E-State: =C<	2D
maxwHBa	Maximum E-States for weak Hydrogen Bond acceptors	2D
SP-6	Simple path, order 6	2D
GATS1p	Geary autocorrelation - lag 1 / weighted by polarizabilities	2D
VE1_Dzv	Coefficient sum of the last eigenvector from Barysz matrix / weighted by van der Waals volumes	2D
VP-5	Valence path, order 5	2D
SP-7	Simple path, order 7	2D
maxaaS_C	Maximum atom-type E-State: :C:-	2D
maxaaCH	Maximum atom-type E-State: :CH:	2D
MWC4	Molecular walk count of order 4 ($\ln(1+x)$)	2D
BCUTp-1h	nlow highest polarizability weighted BCUTS	2D
GATS8c	Geary autocorrelation - lag 8 / weighted by charges	2D
VPC-5	Valence path cluster, order 5	2D
SpMax2_Bhp	Largest absolute eigenvalue of Burden modified matrix - n 2 / weighted by relative polarizabilities	2D
piPC9	Conventional bond order ID number of order 9 ($\ln(1+x)$)	2D
TpiPC	Total conventional bond order (up to order 10) ($\ln(1+x)$)	2D
piPC10	Conventional bond order ID number of order 10 ($\ln(1+x)$)	2D
GATS1c	Geary autocorrelation - lag 1 / weighted by charges	2D
MATS3s	Moran autocorrelation - lag 3 / weighted by I-state	2D
ETA_Alpha	Sum of alpha values of all non-hydrogen vertices of a molecule	2D
AATSC1i	Average centered Broto-Moreau autocorrelation - lag 1 / weighted by first ionization potential	2D
GATS5e	Geary autocorrelation - lag 5 / weighted by Sanderson electronegativities	2D
SpMax2_Bhv	Largest absolute eigenvalue of Burden modified matrix - n 2 / weighted by relative van der Waals volumes	2D
SpMin2_Bhi	Smallest absolute eigenvalue of Burden modified matrix - n 2 / weighted by relative first ionization potential	2D
