## KEYWORDS

Food Webs Analysis (FWA), environmental DNA (eDNA), marine communities, abiotic factors, fishing pressure, Mediterranean Sea

## A Corrigendum on

## Spatial analysis of demersal food webs through integration of eDNA metabarcoding with fishing activities

By Cicala D, Maiello G, Fiorentino F, Garofalo G, Massi D, Sbrana A, Mariani S, D'Alessandro S, Stefani M, Perrodin L and Russo T (2024) *Front. Mar. Sci.* 10:1209093. doi: 10.3389/fmars.2023.1209093

## Missing Citation

In the published article [D'Alessandro & Mariani, 2021] was not cited in the article. The citation has now been inserted in [Introduction], [Paragraph Number 2] and should read:

**“eDNA metabarcoding in fact emphasises the taxonomic units rather than pools and fluxes of energy, biomass or nutrients, enabling accurate and cost-effective biodiversity assessments (D'Alessandro and Mariani, 2021; Kelly et al., 2017, 201; Stat et al., 2019), which leads to Molecular Ecological Network Analysis (MENA - Deng et al., 2012; Stat et al., 2019).”**

The full reference is: D'Alessandro, S., and Mariani, S. (2021). Sifting environmental DNA metabarcoding data sets for rapid reconstruction of marine food webs. *Fish Fish* 22, 822–833. doi: 10.1111/faf.12553.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
