

## **Real World Validation: Inclusion criteria for screening of articles**

Articles to be included needed to:

1. Be an evaluation of a commercialisable approach/tool/procedure/product;
2. Include real world data;
3. Be a health-related study;
4. Be a completed, rather than planned, study;
5. Not include the term 'real' only in the name of an approach/tool/procedure/product;
6. Not use the term 'realistic' only as a descriptor of an aim rather than the study methodology;
7. Not be a model or approach in development;
8. Not be a study analysing only patients/participants rather than the commercialisable approach/tool/procedure/product;
9. Not be a presentation of a new model or algorithm built using real data; and
10. Not be an evaluation of acceptability of a concept rather than a specific approach/tool/procedure/product.
