

Table 3.

CCFI values for the three item indicators and full scale.

	<i>MAMBAC</i>	<i>MAXEIG</i>	<i>L-MODE</i>
General population sample item indicators	0.297	0.134	0.277
Whole sample item indicators	0.591	0.201	0.357
General population sample full scale	0.171	0.081	0.187
Whole sample full scale	0.327	0.122	0.234

Note: CCFI is a value between 0 (dimensional) and 1 (categorical). The greater the deviation of a CCFI score from .5, the stronger the result; when a CCFI score is between .4 and .6, results should be interpreted with some caution.
